UPADHA AI — KAUTILYA'S TEST OF STATECRAFT

Production-Grade Civil Services Examination (UPSC CSE) Full-Stack AI Platform

Author & Lead Architect:	Sanath S Gowda (Full-Stack AI & Systems Engineer)	**Target Framework:**	UPSC CSE Prelims, Mains & Personality Test
Production Deployment:	https://upadha-ai.onrender.com/	**Cloud Database:**	Turso Cloud SQLite (AWS Mumbai, aws-ap-south-1)
Source Repository:	github.com/Sanathgowda-17/upadha-ai	**Mobile Native Build:**	Capacitor Android APK (4.0 MB Standalone)

1. EXECUTIVE SUMMARY & ARCHITECTURAL VISION

Upadha AI is an enterprise-grade EdTech system inspired by ancient Kautilyan statecraft principles (specifically *Upadha-Pariksha* from Book I of the Arthashastra — the comprehensive psychological and ethical tests used to verify ministerial aptitude). The platform resolves a critical systemic bottleneck in India's Union Public Service Commission (UPSC) Civil Services Examination, where over 1,000,000 candidates compete for fewer than 1,000 elite administrative posts. Traditional coaching evaluations suffer from severe 14-to-21 day evaluation turnaround delays, subjective examiner bias, and exorbitant commercial fees (₹50,000–₹1,50,000). Upadha AI delivers sub-second streaming multidimensional evaluation, multimodal vision handwriting transcription, a 5-member interview board simulator, and collaborative peer circles.

2. SYSTEM ARCHITECTURE & TECHNICAL STACK

Layer	Component	Technologies & Architecture	Role & Performance Metrics
Client & Mobile	Hybrid Dual-Mode PWA & Android App	Vanilla ES6+, CSS Grid/Flexbox, Capacitor SDK, Service Worker	Zero-bundle footprint, responsive on both desktop and mobile; standalone 4.0 MB Android APK.
Backend Core	Event-Driven HTTP Microserver	Node.js Built-in HTTP, Server-Sent Events (SSE), Crypto	Sub-second token streaming, PBKDF2 100k-iteration salting, zero external framework overhead.
AI Engine	Multimodal Vision & LLM Service	Gemini Vision 1.5, Prompt Engineering, PESTLE Framework	Multi-page sequential OCR, bell-curve scoring out of 10/15, 275-mark interview evaluation rubric.
Persistence	Dual-Engine Active-Passive Database	Turso Cloud SQLite (libSQL Pipeline) + Local node:sqlite	Persistent multi-container sync in AWS Mumbai; seamless local fallback during network loss.

3. THE 6 FLAGSHIP INNOVATION PILLARS

Pillar 1: Multimodal Sequential Booklet OCR & Vision Pipeline

- **Sequential Handwriting Recognition:** Ingests multi-page physical UPSC ruled booklet photos or multi-page PDFs via a drag-and-drop ribbon. The backend bundles raw image buffers into sequential inline MIME parts, enabling Gemini Vision to transcribe full 250-word answers without OCR stitching errors.
- **Dual Submission Modes:** Candidates can either type directly in the markdown sanctum or upload handwritten sheets to simulate actual exam hall conditions.

Pillar 2: Interactive 'Topper vs. Aspirant' Visual Diff & Value-Add Checklist

- **Three-Way Verdict Views:** Candidates can toggle between *Marksheet Report*, *Topper vs Aspirant Diff*, and *Value-Add Checklist*.
- **Semantic Audit Chips:** Regex-driven scanning detects whether key Constitutional Articles (153, 200, 356, 368), landmark Supreme Court rulings (*S.R. Bommai*, *Kesavananda*, *Shamsher Singh*), and statutory commissions (*Sarkaria*, *Punchhi*, *2nd ARC*) were cited.

Pillar 3: Dholpur House Personality Test & DAF Simulator (UPSC CSE Stage 3)

- **5 Board Member Personalities:** Simulates the official interview board at Dholpur House, New Delhi: Chairman (Retd. IAS), Member 1 (Veteran IPS), Member 2 (Distinguished IFS Ambassador), Member 3 (Senior Economist), and Member 4 (Applied Psychologist).
- **275-Mark Official Rubric:** Scores candidate across Administrative Poise (/50), Constitutional Neutrality (/50), Articulation (/50), Moral Courage (/50), and DAF Acumen (/75), featuring natural Web Speech audio recitation and speech-to-text voice dictation.

Pillar 4: Automated Live National Editorial Scraper (PIB & Law Review)

- **Real-Time Ingestion:** Endpoint GET /api/current-affairs/live-fetch extracts daily dispatches from the Press Information Bureau (PIB) and constitutional law journals, mapping them to 3 Prelims bullet points and generating 1-click 'Practice Directive' Mains prompts.

Pillar 5: The Court of Amatyas (Benchmark Revision Vault)

- **Public Topper Exemplars:** Filterable repository across GS1–GS4 featuring authentic high-scoring model answers, dynamic Mermaid.js flowchart mindmaps, 1-click practice launch, and local revision bookmarking.

Pillar 6: Mandala Circles (Collaborative Peer-Review Network)

- **Collaborative Study Guilds:** Aspirants can create public or passcode-protected private study circles (e.g. GS2 Federalism Circle, GS4 Ethics Guild).
- **Parchment Dispatch & Peer Critique:** Candidates dispatch evaluated answers directly to their circle feed; peers submit constructive value-add critiques with case-law tags and peer marks (/10), institutionalizing peer learning.

4. MOBILE ENGINEERING & ANDROID PACKAGING

Upadha AI delivers a native-grade mobile experience without multi-megabyte app bloat. Using **Capacitor SDK**, the web codebase is wrapped into a native Android application (ai.upadha.app). The Android WebView settings were explicitly normalized in MainActivity.java by disabling setLoadWithOverviewMode and fixing text zoom, eliminating virtual desktop shrinking. On screens ≤ 768px, the interface dynamically transitions from the top stone edicts bar to a docked **Mobile Bottom Navigation Bar** with touch targets ≥ 48px and 16px legible root typography. The compiled standalone Android package (Upadha-AI-v1.0.apk, 4.0 MB) installs directly onto any Android 7.0+ device.

5. DATABASE ARCHITECTURE & RESILIENCE

The persistence tier employs a resilient dual-mode strategy. When running in production on Render, queries route via HTTP pipeline to **Turso Cloud SQLite** (libSQL) hosted in the AWS Mumbai region (aws-ap-south-1), guaranteeing sub-25ms regional latency and permanent persistence across dyno restarts. In isolated sandboxes, offline environments, or during transient network interruptions, the database adapter automatically executes an active fallback to local SQLite (node:sqlite), ensuring 100% operational uptime.

6. PRODUCTION VERIFICATION & DELIVERABLES DIRECTORY

Deliverable	Repository / Location	Status & Verification
Live Production App	https://upadha-ai.onrender.com/	**Active (HTTP 200 OK)** • Render Cloud deployment (Commit 6e49f3d)
Upadha AI Repository	github.com/Sanathgowda-17/upadha-ai	**Synced on origin/main** • Full backend, frontend & Android scaffold
Android Native APK	upadha-ai/Upadha-AI-v1.0.apk (4.0 MB)	**Compiled & Verified** • Sideloadable on Android 7.0 (API 24) to Android 16
1-Page ATS Resume	Sanath_S_Gowda_Resume.pdf	**Compiled (ReportLab)** • Upadha AI featured as #1 Flagship Project
Cloud Database	Turso Cloud (AWS Mumbai, aws-ap-south-1)	**Active** • Dual-mode persistence with automatic local fallback
